## $6^{\text {th }}$ July

1. The equation relating to a pendulum undergoing simple harmonic motion is:

$$
T=2 \pi \sqrt{\frac{L}{g}}
$$

a. Rearrange the equation to make $L / T^{2}$ the subject

An experiment was carried out by a student to determine the gravitational field strength using a simple pendulum. They adjusted the length of a pendulum and measured the time for ten complete oscillations.
b. Complete the table, with values for the time period for one oscillation and $\mathbf{T}^{2}$

| Length / m | $\mathrm{t}_{10} / \mathrm{s}$ | $\mathrm{T} / \mathrm{s}$ | $\mathrm{T}^{2} / \mathrm{s}^{2}$ |
| :---: | :---: | :---: | :---: |
| 0.30 | 10.8 | 1.08 | 1.17 |
| 0.35 | 11.5 | 1.15 | 1.32 |
| 0.40 | 12.6 | 1.26 |  |
| 0.45 | 13.2 | 1.32 |  |
| 0.50 | 14.2 |  |  |
| 0.55 | 14.4 |  |  |
| 0.60 | 15.2 |  |  |

c. Plot the data on the graph and calculate the gradient of the straight line

| $0.40$ |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |
| - 0.30 |  |  |  |  |  |  |  | $\rightarrow$ |  |
| $+1.0$ | 1.2 | 1.4 | 1.6 | 1.8 | 2.0 | 2.2 | 2.4 |  |  |
|  |  |  |  | $\mathrm{T}^{2} / \mathrm{s}^{2}$ |  |  |  |  |  |

The gradient of the line is equal to $L / T^{2}$.
d. Use your calculated value for the gradient to determine an experimental value of ' $g$ ' from this experiment
